Certifications

- CCNP Enterprise Core** 2025
Cisco, ENCOR 350-401
- IPv6 Forum Silver** to 2028
Protocol expertise and conformance
- CCNA 200-301** 2023
Cisco
- ICCA Cloud Associate** active
INE
- eJPT Penetration Tester** active
INE / eLearnSecurity

Skills

- Routing and switching**
IPv6, NDP, DHCPv6, ICMPv6, BGP, OSPF/OSPFv3, VLANs, STP, EtherChannel, TCP/IP, DNS/DHCP, ARP
- Automation**
Robot Framework, Python, Bash, Docker, Linux network namespaces, UCI, Claude Code, Cursor
- Virtualisation and cloud**
NFV/VNF, K3s/Kubernetes, VMware vCenter/ESXi, KVM, Docker, SDN, GNS3, EVE-NG
- Security**
IPsec VPN, firewalls/ACLs, ITSAR, pfSense, OpenVPN, NAT, OWASP Top 10, Nessus, Burp Suite, SNMP
- Analysis**
Wireshark, tcpdump, Nmap, Linux (RHEL/Ubuntu), Metasploit, Scantist, Snort
- Platforms**
Cisco, Palo Alto, Arista, Fortinet, Extreme, HFCL, NVIDIA, Sophos, Ericsson, Array/A10, Aruba

Education

B.E. Computer Science
Nitte Meenakshi Institute of Technology, 2022

Tejesh Chowhan U N

System Validation Engineer, Netgear India

Network and infrastructure engineer with 3+ years across telecom, cloud-native and enterprise networking. I own IPv6 quality on Netgear's routers, validate L2/L3 protocols on real hardware, led IPv6 Ready Logo certification for five devices, and build the automation, from Robot Framework suites to a Docker harness for 300 VPN clients, that replaces manual regression.

Experience

- Netgear India** Jun 2026 to present
System Validation Engineer I and IPv6 QA lead, R&D router team
 - Own IPv6 on the router product: gatekeep incoming Jiras, reproduce, run first-level RCA and update each ticket before it reaches development.
 - Built a Docker harness that automates VPN scalability testing with 300 concurrent clients using Linux network namespaces and UCI, saving about a week of effort for 2 to 3 engineers per cycle.
 - Deployed a virtualised Cisco Catalyst 8000V for interoperability testing; validate OSPF, OSPFv3, BGP, VLAN, STP and EtherChannel with Robot Framework and Python suites.
 - Use Claude Code and Cursor with multiple parallel agents to automate most repetitive test and tooling work.
- InTeleCyber Services** Nov 2025 to Jun 2026
Test Engineer, Network and Cloud Infrastructure
 - Validated Ericsson Cloud Router in a cloud-native NFV environment: 100+ control and user plane test cases at 95%+ accuracy.
 - Deployed containerised network functions on K3s via the Ericsson NCOM SDN controller; validated inter-pod communication and SDN control plane behaviour.
 - Installed VMware vCenter and ESXi hosts, provisioned 15+ VMs, cutting lab setup time by about 30%; ran ITSAR compliance audits.
- CNLABS** Dec 2023 to Nov 2025
Network Test Engineer
 - Led IPv6 Ready Logo testing for 5+ devices: 400+ conformance and 100+ interoperability cases per device. Every device certified.
 - Designed and executed 200+ test cases across 8 vendors covering L2/L3, VLAN, STP, BGP/OSPF and IPv4/IPv6 dual-stack.
 - Configured Fortinet firewalls and IPsec tunnels, evaluated optics from 1G to 400G, and automated validation with Python and Bash, cutting manual effort by about 25%.
- IBUS** Jul 2023 to Nov 2023
Network Support Executive
 - Kept enterprise network infrastructure at 99.9% uptime and cut incidents by 40% through proactive monitoring and root-cause analysis.
 - Rolled out OS, firmware and software updates across 50+ devices with zero downtime.

Selected work

IPv6 Ready Logo certification
Phase-1 and Phase-2 for five devices covering NDP, DHCPv6, ICMPv6, address selection and dual-stack. **Every device certified.**

VPN scalability harness in Docker
300 clients in network namespaces, router driven through UCI, fully automated end to end. **About a week saved per cycle.**
